Reports on request

Tell us the question, we build the report from your data and deliver it editable and as a PDF, with your brand.

on request we build it with you

How it works

- You tell us the question, such as “Where do people get hurt the most?” or “Which risks have no engineering controls?”
- We build it from **your data**, what’s already in VivoGRC.
- You can send us data from your management system (a file) and we’ll build the report in the Office, editable.
- We deliver it as an **editable document in Vivo Docs**, with your brand, as a **PDF**, and in **Word, PowerPoint or Excel** (.docx, .pptx, .xlsx). Before you use it, you can fix a sentence, add a comment or change the order.

The recurring ones

- A monthly or yearly report becomes a **controlled document**, with its versions.

on request

- Each new version shows **what changed** from the previous one.

With Riesgoberto, the risk AI

- **Proposed level** for each risk with its controls (NTP 330), and what could be improved.
- **Risk assessment and site plans** built from your data.
- Everything comes as a proposal for your safety officer to validate, within the company’s AI use policy.

Some reports built this way

REPORT	WHAT IT SHOWS
Accidents and incidents by month	How many per month, the trend, and accidents versus incidents.
Where accidents happen	Accidents and incidents by sector and process, the most frequent first.
Most frequent causes	The causes that keep coming back and which risks they touch.
Accident follow-up	Which ones have actions and follow-up, and which were left open.
Risk map by level	How many risks sit at each level, by process and sector.
Quality of controls	How much of the control is engineering and how much is only administrative or PPE.
Risks by job	Which risks each job carries, for inductions or medical exams.
Due dates	Licenses, exams and data sheets coming due in the next 90 days.
